Brock – I have a conflict 2-3 PM today and have not had an opportunity to review Carl's questions and the additional documents you sent, other than the issue of applying the modifying factor of 3 when assessing exposure to manganese from drinking water, so I declined the invite.

With regard to manganese, multiplying the drinking water intake by the modifying factor of 3 (i.e., using a drinking water intake of 6 liters rather than 2 liters) and using the RfD of 0.14 mg/kg/day in the water + organism equation would be an appropriate approach since the modifying factor is only recommended for use with the drinking water exposure and not the fish exposure.

I have to take a call now, will try to acquaint myself with what you sent and get back to you about a meeting.

- Bill

Hello Bill,

Enclosed are a couple documents that will help guide our conversation tomorrow. Please let me know if you WILL NOT be able to make the proposed meeting at 2pm (Pacific) that I sent you earlier today. Nancy and I are keen to keep this moving forward and will be happy to work with you on scheduling if needed.

Thank you.

P.S. 10+” of fresh snow over the weekend with more on the way. Would make for a fine place to visit if you're so inclined.
